

# Linear Actuators

## Plate Stacks, compact design

### Features

- Free displacement up to 128.7  $\mu\text{m}$
- Very low operating voltages (down to 60V)
- Very high force in the kN range
- High stiffness for short response times (<1ms)
- Height up to 80 mm
- Continuous operation up to 150°C
- Wide range of add-ons

### Applications

- Micro- and nanopositioning
- Industrial equipment
- Active vibration control
- Valves
- Laser tuning
- Shaker

### Description

CTS tape cast multilayer piezoelectric linear actuators are ideal for a wide range of electronic designs requiring precise and fast movement. CTS multilayer piezoelectric plate actuator stacks can be stacked to fit the needed height or stroke. Maximum height and stroke are 80 mm and 128.7  $\mu\text{m}$  for our standard products and with a capacitance up to 34050 nF depending of the height of the plate stack. The specific stroke and capacitance of each product can be found below.

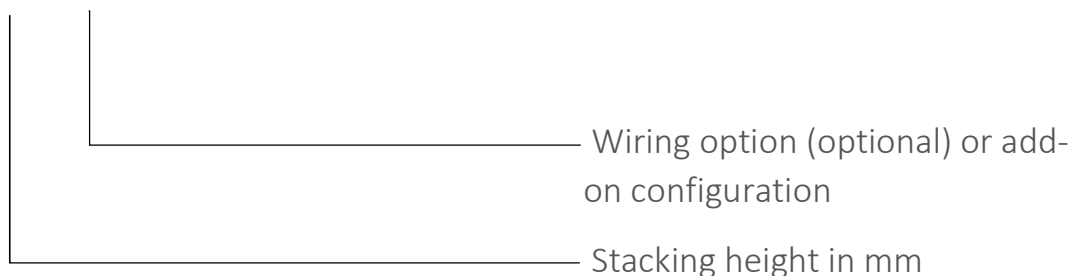

### Standard Product, add-ons or Custom Solution

This document contains information about the CTS standard multilayer plate stacks and available add-ons. All the CTS multilayer products can be custom designed to match specific requirements – find more information on [www.ctscorp.com](http://www.ctscorp.com) or contact your local sales representative.

Product Designation

NAC4013-H20-A01

Specifications

Common parameters for the product series:

Product series	NAC4001-HXX	NAC4011-HXX	NAC4002-HXX	NAC4012-HXX	Unit
Length (L)	2 +0.30/-0.10		3 +0.30/-0.10		mm
Width (W)	2 +0.30/-0.10		3 +0.30/-0.10		mm
Max width (W <sub>M</sub> )	3.00 Max		4.00 Max		mm
Height (H)	4 to 20* +/-0.20 or 1% (whichever is largest)		4 to 30* +/-0.20 or 1% (whichever is largest)		mm
Operating voltage, V <sub>max</sub>	60	150	60	150	V
Blocking force, 0 to V <sub>max</sub>	168 +/-20%		378 +/-20%		N
Operating temp. range	-40 to 150				°C
Material	NCE51F		NCE51F		-
External electrodes	Screen-printed silver-palladium, tinned copper-beryllium bus-wire				-

Product series	NAC4003-HXX	NAC4013-HXX	NAC4014-HXX	NAC4024-HXX	Unit
Length (L)	5 +0.30/-0.10		7 +0.35/-0.15		mm
Width (W)	5 +0.30/-0.10		7 +0.35/-0.15		mm
Max width (W <sub>M</sub> )	6.00 Max		8.00 Max		mm

## Plate Stacks, compact

Height (H)	4 to 50* +/-0.20 or 1% (whichever is largest)		4 to 70* +/-0.20 or 1% (whichever is largest)		mm
Operating voltage, $V_{max}$	60	150	150	200	V
Blocking force, 0 to $V_{max}$	1050 +/-20%		2060 +/- 20%		N
Operating temp. range	-40 to 150				°C
Material	NCE51	NCE51F	NCE51F	NCE51F	-
External electrodes	Screen-printed silver-palladium, tinned copper-beryllium bus-wire				-

Product series	NAC4015-HXX	NAC4025-HXX	NAC4026-HXX	Unit	
Length (L)	10 +0.40/-0.20		15 +0.50/-0.30	mm	
Width (W)	10 +0.40/-0.20		15 +0.50/-0.30	mm	
Max width ( $W_M$ )	11.00 Max		16.00 Max	mm	
Height (H)	4 to 80* +/-0.20 or 1% (whichever is largest)		4 to 80* +/-0.20 or 1% (whichever is largest)		mm
Operating voltage, $V_{max}$	150	200	200	V	
Blocking force, 0 to $V_{max}$	4200 +/- 20%		9450 +/- 20%		N
Operating temp. range	-40 to 150				°C
Material	NCE51F			-	
External electrodes	Screen-printed silver, tinned copper-beryllium bus-wire			-	

\* See the different height options and corresponding free displacement and capacitance data in the tables below.

Data are specified for room temperature and static operating conditions. Performance for dynamic operation or higher/lower temperature operation must be determined by experiment.

This product contains materials which present health hazards by inhalation or ingestion. Do not attempt to disassemble, grind or melt the product and dispose of according to local regulations. Based on information provided by our suppliers, CTS designates this product as RoHS compliant.

Drawing

Mounting, Connecting and Driving

Please refer to our online tutorials for recommendations about mounting, connecting and driving plate stacks.

80	128.7	34050

\* whichever is largest

Stack heights exceeding listed value on request.

## Add-ons

### Wire Options

When you order actuators from CTS, you can have wires fitted to save time and money. However, you should consider these parameters, when you select a wire for connection:

- Operation voltage
- Intensity of current
- Operating temperature
- Environment, for example vacuum

### We recommend wires with PTFE insulation

PTFE wires can stand temperatures above 200 °C, whereas PVC wires only resist temperatures up to 80 °C. We recommend PTFE for the thermal and chemical resistance of the insulation.

For vacuum and cryogenic applications, we recommend Kapton wires, which offer superior outgassing and flexibility.

### Standard wire options for Plate Stacks

Two standard wire options are available:

	Option A01	Option A02
Wire type	NAC4001, NAC4011, NAC4002, NAC4012	MIL-W-16878/6, 32 AWG, 7 strands
Wire type	NAC4003, NAC4013 NAC4014, NAC4024 NAC4015, NAC4025 NAC4026	MIL-W-16878/4, 28 AWG, 7 strands
Length	200mm +/-10mm	
Position	Middle of the actuator	
Direction	Perpendicular to the height	Toward the top

Wires: White (-) Red (+)

Type A01

Type A02

### Wire gauge (AWG)

The wire gauge (AWG) and insulation type should be determined according to the voltage, current and operating environment. Should the standard –A01 or –A02 configuration not suit your application, we offer several alternative wire types:

Wire type	Voltage rating [V]	Approx. outer diameter [mm]	Rec. max. current [A]	Min. operating temperature [°C]
32AWG, MIL-W-16878/6, 7 strands	250	0.6	0.53	-60
30AWG, MIL-W-16878/4, 7 strands	600	0.8	0.86	-60
28AWG, MIL-W-16878/4, 7 strands	600	0.9	1.4	-60
28AWG, Allectra 301-KAPM-035 (Kapton insulation, UHV)	7500*	0.58	1.0	-269
22AWG, BS3G210 Type A, 19 strands	300	1.1	8	-75

\* In vacuum conditions

As part of our custom program, we can also stock specific wire.

### UHV preparation

Ultra high vacuum (UHV) is the vacuum regime characterized by pressures lower than about  $10^{-7}$  pascal or 100 nanopascals ( $\sim 10^{-9}$  torr). Extreme cleanliness and low outgassing are essential parameters in sustaining the vacuum level in such systems. Elevated temperature compatibility is often needed since water vapour and other trace gasses are removed from the system during a "bake-out".

CTS piezoceramic components are designed to support system development and integration of piezo technology in UHV applications. Among many technical capabilities, CTS is competent in producing piezoelectric actuators meeting the demands on temperature compatibility and out gassing levels set by UHV operation.

For low outgassing, Kapton-insulated wires are recommended. In addition, with the UHV preparation the products will undergo a specific cleaning process and be packaged in sealed pouches.

### Reduced tolerances

For demanding applications, piezoelectric actuators can be re-worked after stacking in order to achieve better geometrical and dimensional properties. CTS offer this customization possibility for stacks with cross sections of 5x5 mm, 7x7 mm and 10x10 mm.

Product series	Standard height tolerance	Reduced height tolerance
NAC4003 NAC4013	+/-0.2mm or +/-1%*	+/-0.025mm
NAC4014 NAC4024	+/-0.2mm or +/-1%*	+/-0.040mm
NAC4015 NAC4025	+/-0.2mm or +/-1%*	+/-0.050mm

\* whichever is largest

In addition, it is possible to re-work the length or specify a smaller maximum width. These possibilities are available through our custom program.

### Strain-gauge

A strain gauge is a simple way of obtaining feedback on the deformation of a piezoelectric actuator, typically to achieve closed-loop control. Strain gauges are recommended for experimental setups and small series. CTS offer a standard version for piezo plate actuators (single and stacked) which is designed as a half bridge with two grids at 90°. The strain gauge is a very compact solution and can therefore be fitted to actuators with a free surface of 5x5 mm or bigger, i.e. series NAC4003/NAC4013 and above.

The characteristics of the strain gauge are:

Strain gauge parameters	
Nominal resistance	350 Ω
Nominal sensitivity	1 mV/V
Maximal range of deformation	2%
Deformation range of the actuator	0.1- 0.2 % Depending on the actuator type
Temperature range	-40 – +150 °C
Recommended supply voltage	5 V AC or DC Depending on temperature range and heating of the gauge

The bandwidth of the measurement system will depend on the signal conditioner that is used. A conditioner with a carrier frequency will typically have a cutoff frequency below 200Hz. “DC” type conditioners have a wider bandwidth but are more sensitive to noise.

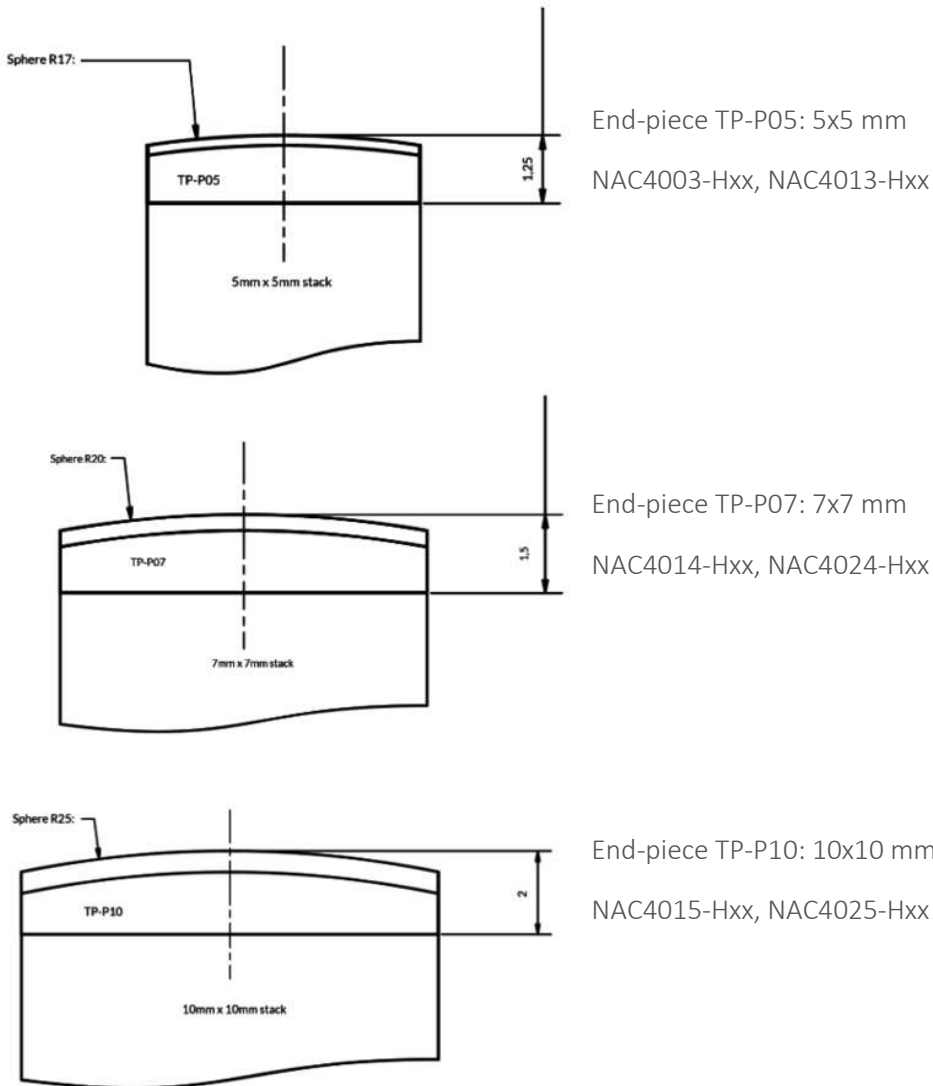

The strain gauge has a range of 2% strain while the stack typically generates 0.18% strain (at room temperature). Therefore the output range will be about 9% of the full range. The nominal gauge factor specified by the manufacturer is 1.99+/-2%. However if quantitative measurements are required, it is recommended to perform an initial characterization of the strain-gauge directly in the application using an external sensor.

End-pieces

Metallic end-pieces can be useful in terms of:

- Spreading a high mechanical load on the whole surface of an actuator
- Providing some de-coupling, i.e. allowing a stack to tilt
- Centering an actuator in an assembly

CTS stock end-pieces for our most popular cross-sections (5x5, 7x7 and 10x10 mm). The material is stainless steel (AISI 316). These products are compatible with:

The design is compact, with spherical caps providing some de-coupling, thereby releasing the requirements on alignment. The parts are low-magnetic and compatible with our other add-ons (UHV, wires etc.). End-pieces can

be attached at one or both ends of a stack. They can be supplied with a short lead-time and are more cost-effective for small series.

## End-plates

As a standard, piezoelectric stacks are supplied with 1mm thick ceramic end-plates. All our standard end-plates and end rings are produced with our piezoceramic material NCE51. Ceramic provides ideal electrical insulation properties, low thermal expansion mismatch as well as good mechanical properties to spread the load over the surface of the active piezoceramic. We recommend a thickness of 1mm for a good spread of the load.

It is nevertheless possible to use different configurations as illustrated below:

Note that stacks without end-plates or chamfers must not be mounted against a conductive surface, to avoid the risk of short-circuits between the surface electrodes.

## Linear Actuators Product Families

---

Plate and Ring Actuators

Stacked Actuators:

- Plate Stacks
- Plate Stacks, compact
- Ring Stacks
- High Temperature Stacks
- Damage Tolerant Stacks

Preloaded Actuators
